

# Vanishing Point

Moon Gallery

Alexandra Arshanskaya

**A vanishing point is a fundamental concept of perspective representation and conveys the essence of human perception of space.**

Our spatial perception is unique and ultimately connected with a space we explore. Here on Earth we construct perspective representation following general visual and mathematical laws and physiological abilities as well as limitations of human eye. With some adjustments the same rules will work on the Moon surface. A vanishing point is a point in a perspective drawing to which parallel lines not parallel to the image plane appear to converge. This is the one of the most important concepts in perspective representation.

Alexandra's oil painting 'Vanishing Point' represents a vanishing point in an almost abstract way and was inspired by the view of a channel in a Dutch city. In this painting the vanishing point itself is not visible as the lines converge into a white background. This reminds of a light in the end of tunnel and can be seen as a metaphor for unreachable perfection. For the Moon Gallery project the painting is located inside a cube and the image continues along the inner sides of the cube to exaggerate the spatial perception and create the illusion of infinity.

This project will represent the human spatial perception in space.

Below are presented a photo of the prototype (cube 18 cm) and its layout.

Alexandra Arshanskaya is a visual artist, visual thinker and performer with a background in exact science (physics and mathematics). She works in different visual media and techniques like paintings, drawings, performances, photography, videography, illustrations, and collaborate on interdisciplinary projects. Alexandra's art practice is devoted to spatial perception and includes a broad exploration of representation and abstraction of space, such as architecture, urban landscapes, perspective, vanishing points, surfaces, intersections and reflections on reality.
